Summary

Cybersecurity-focused Computer Science student at NIT Puducherry with hands-on experience in penetration testing, VAPT, ethical hacking, and offensive security techniques. Proficient in performing web application security assessments, vulnerability analysis, reconnaissance, and exploitation using tools such as Burp Suite, Metasploit, and Nmap. Built practical security projects including a honeypot monitoring system for attacker behavior analysis. Strong interest in web application security, vulnerability assessment, network exploitation, and offensive security research. Seeking an internship to apply and deepen practical VAPT and penetration testing skills in real-world environments.

Education

National Institute of Technology, Puducherry | Karaikal, Puducherry
BTech in Computer Science Engineering | 05/2028
CGPA - 8.3/10

Skills

- **Pentesting & Offensive Security:** Ethical Hacking, VAPT, Web Application Security Testing, Network Penetration Testing
- **Tools:** Burp Suite, Metasploit, Nmap, Gobuster, Hydra, Netcat, Wireshark, SQLmap (Learning)
- **Security Techniques:** Vulnerability Assessment, Reconnaissance, Enumeration, Password Attacks, Service Exploitation, OSINT, Log Analysis
- **Relevant Domains:** OWASP Top 10, Web Exploitation, Authentication Bypass, Injection Testing

Experience

Internz Valley

Cyber Security Intern (Training + Internship) | 11/2024 - 12/2024

Completed hands-on cybersecurity training covering VAPT methodologies, reconnaissance, enumeration, vulnerability assessment, and exploitation techniques using tools such as Nmap, Metasploit, and Burp Suite.

Built a Secure Image Encryption System using byte-level cryptographic techniques to demonstrate secure data handling and confidentiality concepts.

Projects

Honeypot Monitoring System

Cybersecurity | Python, Linux, Socket Programming

Deployed simulated vulnerable services to capture real attacker activity including login attempts, source IPs, and executed commands

Analyzed intrusion patterns and attacker TTPs to understand real-world exploitation behavior and attack vectors

Secure Image Encryption System

Cryptography | Python, Cryptography, File Handling

Built a key-based tool to encrypt and decrypt image files using byte-level cryptographic techniques

Demonstrates applied understanding of data confidentiality and secure file handling relevant to pentesting engagements

Personal Portfolio Website

Web Development | HTML, CSS, JavaScript, Flask

Designed and deployed a responsive portfolio with custom domain, backend integration, and SSL enforcement

Applied web security fundamentals including HTTPS configuration and secure hosting practices during deployment
